

Florida Youth Tobacco Survey

Florida Youth (Ages 11-17), High School and Middle School Data

The Florida Youth Tobacco Survey (FYTS) was last administered in the spring of 2024. A total of **652** public high schools and middle schools in **60** Florida counties participated in the FYTS. There were **50,296** students who participated in the 2024 FYTS; **25,003** at the high school level and **25,293** at the middle school level.

The data presented in this database were weighted to represent the entire population of public middle and high school students in Florida. Beginning with the 2020 survey cycle, the FYTS vendor and the Florida Department of Health agreed to lower the threshold from a 60% combined (school x student) to a 50% response rate with some additional data comparisons. Since the high school overall response rate was below 50%, additional analyses were undertaken to determine if the data would be weighted.

2024 FYTS Response Rates:

High School: School Response Rate: 86.0%

Student Response Rate: 68.7% Overall Response Rate: 59.0%

Middle School:

School Response Rate: 85.4% Student Response Rate: 78.2% Overall Response Rate: 66.8%

The interactive database is a user-friendly way for public health professionals, students, teachers, parents, and the public to explore data pertaining to youth tobacco use.

If you have questions about the database, please contact the Florida Youth Survey Coordinator at *Florida YouthSurvey@FLHealth.gov.*
